**Crawford
Ranges**

are now equipped with convenient Gas End
Ovens of the new, improved Drop-broiler type
—with center-heat burners.

Unlike some so-called "combination" ranges, the Crawford has
two separate and distinct ovens: one for gas and one for coal—
both perfect.

The Crawford Gas Oven is larger and better than most ovens.
It is fitted with the only safety lighter approved by the American
Museum of Safety.

Good cooking, always a habit with all Crawford, is now made doubly easy,
convenient and pleasurable. Folded beneath the oven (out of the way
when not in use) is the new, ingenious Drop-broiler.

This convenient feature is a great aid
to better cooking because it permits
instantaneous adjustment of distance
between flame and food—without
touching the pan—without bending
over.

Other important features are the five
center-fire top burners of a new type

(most ranges have only three), con-
cealed pipes, sanitary top grates and
guaranteed cocks.

Then there is the famous Single
Damper that regulates fire and oven
with a single move of an always-cool
knob.

When you go to your Crawford Dealer and investigate them and
the many other distinctive Crawford appliances, you will
realize why there is no range like the Crawford in the world.

NORWICH UNIVERSITY

About 40 Candidates Are Out for the
Football Team.

Norwich university opened Tuesday
evening at retreat with 87 freshmen al-
ready registered. Since then three more
men have entered, making in all 90 new
men. It is reasonable to expect several
more men within the next two weeks.
There are always some new men who
cannot arrange to come on time. This
class is already the next to the largest
ever entered at Norwich, and it
would take only a few more men to make
a new record. Not all the upper class-
men have yet returned. A great many
of the men who have been at Fort Ethan
Allen all summer have been allowed to
go home for a short vacation before tak-
ing up the year's work.

At the chapel exercises on Wednesday
morning Dean Roberts presided; the Hon.
Frank Plumley, vice-president of the

university, made the address of welcome,
and Major Frank Tompkins, U. S. A.,
who has just returned to the university
as commandant after an absence of three
years, gave a short talk on his policy for
the coming year. It was announced that
President Reeves would soon be again on
duty at the university. This fact is a
source of great pleasure to all connected
with Norwich.

Football practice commenced Wednes-
day afternoon with more than 40 candi-
dates out. As soon as all the upper
classmen return this number should be
increased. Coach White seems to be able
to get the ginger into the men and a
good team is expected. It is yet too
early to judge much about the candi-
dates, but several of the freshmen are
showing very good form.

George F. Adams of Winchester, Mass.,
has been engaged as instructor in mathe-
matics and drawing to fill the vacancy
made by the resignation of Prof. William
T. MacCready. Prof. Adams graduated
with high honor in 1915. Since then he
has been working for the government.

FOREST NOTES.

One ton of coniferous wood waste will
produce from 15 to 25 gallons of 190-
proof alcohol.

The farm woodlots of the United
States contain about ten per cent of the
total standing timber in the country.

Grazing experts of the forest service
estimate that the cost of producing
lamb in the northwestern states is \$1.82
per head.

The bark of black oak, or "yellow oak,"
as it is often called on account of the
color of the inner bark, is now used for
dye-making.

The stand of timber on the two great
national forests in Alaska is estimated
by the forest service as over 70 billion
board feet, while the annual growth will,
it is said, produce of pulpwood alone
enough for the manufacture of three
thousand tons of wood pulp a day.

Oak is the most suitable wood for
carving, on account of its durability and
toughness, without being too hard.
Chestnut, American walnut, mahogany
and teak are also desirable, while for
fine work, Italian walnut, lime, sycam-
ore, apple, pear or plum are generally
chosen.

Spirit Leveling in New Mexico.
About 1,500 datum points established
by the United States geological survey
in the state of New Mexico are described
in bulletin 638, "Spirit Leveling in New
Mexico, 1902 to 1915, inclusive," which
has just been issued by the geological
survey. The highest point in the state
yet determined is North Truchas peak,
in Rio Arriba county, 13,306 feet above
mean sea level.

The topographic maps published by
the geological survey show the elevations
to the nearest foot of points within the
area mapped, but the elevations given
in the bulletin on spirit leveling are ex-
act and consequently are of considerable
value to engineers and surveyors who
may require some points on which to
base their work. Bulletin 638 contains
also less exact elevations of nearly 200
well-known summits and other points.

A number of years ago the geological
survey published a "Dictionary of Altitudes"
for the entire United States (now out
of print), but the elevations given in
that volume were nearly all approximate
only; they could not be used as a
basis for work requiring accuracy and
care. The state bulletin on spirit leveling,
however, when complete, will form a
series of inestimable value because
the elevations of most of the datum
points are given to thousandths of a foot
and the points are so described as to be
easily identified.

A copy of bulletin 638 may be obtained
free on application to the director of the
survey at Washington, D. C.

AMUSEMENT NOTES.

California Scenery to Be Shown at Opera
House in "Ramona."

California scenery, most beautiful in
all the world, has been spread be-

scope and variety as in the costly ten-
turel W. H. Clune cinema operatic spec-
tacle "Ramona," which will be presented
at the opera house Friday and Saturday.
Aside from the charm of Mrs. Jackson's
romance, which has sold nearly four
million copies of the novel, the film
spectacle is notable as a superb, panora-
ma of wonderful landscapes faithfully
and adequately representing California
as the garden spot of the universe.
